

Phishing Simulation Log (Gophish)

This log details the specific steps taken to configure and launch the controlled phishing simulation.

1. **Template Setup:** A highly realistic email template (sourced externally) was imported and configured in Gophish to serve as the initial lure. I used [this](#)

2. **Landing Page Configuration:** A dedicated **Landing Page** (fake login portal) was created. This page was configured to capture submitted credentials and redirect users immediately upon submission.

3. **Sending Profile:** The **Sending Profile** was set up to ensure the outbound email appeared legitimate and originated from a trusted source for maximum authenticity.
4. **Campaign Launch:** A new **Campaign** was established, linking the configured template, landing page, sending profile, and target group. The campaign was then officially started.
