Task 2 - Google Dorking

Topic: Finding Publicly Accessible Documents from royalenfield.com
Submitted by: Dennis Jacob

Introduction

Google Dorking is an OSINT (Open-Source Intelligence) technique used to locate data that is publicly available on the internet but may not be easily discoverable through regular browsing. By using advanced Google search operators, it is possible to find files, directories, and pages indexed by Google.
In this task, the target domain is **royalenfield.com**, and the goal is to identify a publicly available PDF brochure.

Search Process

Google Dork Query Used: site:royalenfield.com filetype:pdf intitle:"brochure"
Explanation of the Query:
- **site:royalenfield.com** - restricts search results to Royal Enfield's official domain.
- **filetype:pdf** - filters results to only PDF files.
- **intitle:"brochure"** - matches pages where the word brochure appears in the document title.

Result Found
- **Document Name:** Royal Enfield Scram 411 Brochure
- **Direct Link:** https://www.royalenfield.com/content/dam/royal-enfield/scram/specifications/scram-411-brochure.pdf

Document Analysis
- **Content:** Contains detailed specifications, design features, available color variants, and accessories for the Royal Enfield Scram 411 motorcycle.
- **Purpose:** Marketing material to help potential buyers evaluate the product.
- **Public Availability Reason:** Officially shared on the manufacturer's website for promotional use.

Summary
This exercise showcases how Google Dorks can be used to locate publicly available, useful documents from a specific website. The query successfully identified the Royal Enfield Scram 411 brochure, providing valuable insights into the motorcycle's design, features, and performance specifications.
